5 Steps to Calf Rearing

Around Birth

- Separate the mother & ensure that the calf born in a dry and clean place
- Rub the calf dry with some straws. Keep it in clean & dry place

Colostrum

- Feed 1.5 to 2 liter colostrum directly within one hour after birth
- Feed a second time colostrum (1.5 to 2 liter) within 6 hours after birth
- Feed 1.5 to 2 liter colostrum three times per day
- Feed colostrum to female calves from their own mother only!

Sprayfo Calf Milk Replacer

- Start SprayFo from 4th day after birth
- Strictly follow the instructions while preparing Sprayfo
- Change over on Sprayfo milk replace slowly
- Provide extra water in a clean water bucket minimum 30 minutes after feeding milk replacer

MAXIM Calf Starter

- Start to give MAXIM Calf Starter at 4th day
- Start with small quantities every day fresh. Increase the quantity day by day
- Remove every day the remaining out of the feeding bucket or trough
- Start after 3 weeks with roughage like good quality (alfalfa) hay

Weaning

- The calves should eat at least 1 kg to 1.5 kg calf starter per day
- At minimum live weight of 75 kg for female & 80 kg for male
- At 6- 8 week of age
